Edna Brass Company is a subsidiary of NL Industries Inc. The company operated between 1944 and 1958. Many of NL Industries Inc., subsidiaries were sold many years ago. The information available is minimal. Since the liquidation of this facility, specific information about the company's operations are unknown. H.G. Rodman, NL Industries, speculates that the waste metal dross may have been generated from these processes. The company produced locomotive speciality parts. The Notis form was prepared based on the presumed storage of drosses produced as a by-product of these operations.

Edna Brass Company made metal casting for the production of locomotive parts and bearings. A small quantity of waste metal dross was generated from the making of the metal castings. The castings were made from the melting of tin, zinc, brass and bronze. Ordinarily, the waste dross generated from the production of the castings was sent to smelting companies for recycling and disposal. H.G. Rodman speculates that the amount of waste dross generated at the facility was too small for recycling at the smelting companies. The waste dross may have been recycled on site or sent to a sanitary landfill for disposal. The waste metal dross is not a hazardous substance. With the information available at this time, it may be safe to speculate that there was no environmental impact from waste metal dross. This information is only speculative. Presently a paved parking lot exists at this location.

The facility is a low priority site due to lack of information. F.I.T. and State actions are not warranted at this time.
